Financial instruments

Financial assets and financial liabilities are recognised in the Company's balance sheet when the Company becomes party to the contractual provisions of the instrument.

Financial assets are classified according to the nature and purpose of the financial assets and this classification is determined on initial recognition. As at the reporting date all financial assets of the Company are measured at amortised cost using the effective interest method. The amortised cost is reduced by any impairment losses. In line with IFRS 9, financial assets are assessed for indicators of impairment at each balance sheet date using an expected credit loss model. Financial assets are impaired where there is objective evidence that, as a result of one or more events that occurred after initial recognition of the financial asset, the future cash flows of the investment have been impacted.

Equity instruments are classified according to the substance of the contractual arrangements entered into. An equity instrument is any contract that evidences a residual interest in the asset of the group after deducting all of its liabilities. Equity instruments issued by the Company are recorded at the proceeds received, net of direct issue costs.
